

Take the Worry Out of Your Water!

May 2010 - President's Cancer Panel Report Recommends Filtered Tap Water to Reduce Cancer Risk

In its official annual report entitled “Reducing Environmental Cancer Risks: What We Can Do Now,” the President’s Cancer Panel report states, “Individuals and families have many opportunities to reduce or eliminate chemical exposures. For example, filtering home tap water or well water can decrease exposure to numerous known or suspected carcinogens or endocrine disrupting chemicals.”

Cancer Panel Recommendations

- **Drink filtered tap water.**
- Store food and water in glass, stainless steel or BPA- and phthalate-free containers.
- Minimize children's and pregnant women's exposure to carcinogens and endocrine-disrupting chemicals.
- Choose fruits and vegetables grown without pesticides or chemical fertilizers; wash all produce to remove residues.
- Choose free-range meat that has not been exposed to antibiotics or growth hormones.
- Minimize consumption of processed, charred or well-done meats.
- Turn off lights and electrical devices when they're not in use.
- Drive a fuel-efficient car; walk, bike or use public transportation.
- Check home radon levels.
- Reduce radiation exposure from cell phones and medical tests; avoid UV overexposure.

Environmental cancer risks may be more dangerous than you think

Household and workplace chemicals might contribute to a larger percentage of cancer deaths than previously thought, according to a presidential panel.

Toxins causing 'grievous harm,' cancer panel says

Cancer, Cancer Everywhere

Take the Worry Out of Your Water!

Municipalities do the best they can with the dollars they are given to provide drinkable water to their customers. They use chemicals to treat the water and kill the bacteria and virus. These chemicals are necessary to get the water to your home free of stuff that would make you sick, but just like a banana peel, they should be stripped away before consumption.

A whole house carbon filter is a great solution. **For just pennies a day, you can receive bottled quality water from every tap in your home.**
